ABSTRACTED-PUB-NO: KR2002031539A

BASIC-ABSTRACT:

NOVELTY - An apparatus for fixing a curtain airbag is provided to protect safely a passenger of a rear seat when a vehicle is upset, by providing a supporting member for holding a backward portion of a cushion when expanding the curtain airbag to improve a rolling of the cushion and a vertical

supporting force.

DETAILED DESCRIPTION - An apparatus for fixing a curtain airbag is installed at a rear pillar panel(13) and supports to maintain a balance of a front strap(12) and a cushion when expanding the curtain airbag at a front and rear, thereby restraining a rolling of the cushion and enhancing a vertical supporting force of the cushion. A guide slot(17) is provided at an upper end of the rear pillar panel(13). The guide slot(17) comprises a roller(14) and a bar(15) moving according to the guide slot(17). The roller(14) is placed into the guide slot(17) while one side of the bar(15) is connected at one side of the cushion, so that the cushion is supported using the bar(15) and the roller(14) when expanding the curtain airbag.
